

THE ROLE MFT PLAYS IN GDPR COMPLIANCE

A managed file transfer (MFT) solution simplifies and enhances a data management strategy. MFT provides businesses with the security and control needed to prove General Data Protection Regulation (GDPR) compliance.

What is GDPR?

The General Data Protection Regulation (GDPR) is a new mandate in the European Union (EU) that went into effect on May 25, 2018, and is designed to protect the confidential personal data and privacy of EU citizens. GDPR affects businesses in the EU and in the US, and ensures that companies comply with the mandates contained therein.

A Managed File Transfer (MFT) Solution Supports Data Protection

Managed file transfer (MFT) is both software and a service technology platform that allows for the secure transfer of data through a network.

MFT technology platforms offer a variety of safeguards for data transfer, including:

Centralized Control And Visibility

Executives, department heads and managers need quick and easy visibility into the movement of files and data.

Data Encryption

Encryption is just one security measure that organizations should use to protect sensitive data. An MFT solution can offer encryption for data at rest or in transit.

Custom Compliance Profiles And Reporting

Every organization has its own set of regulatory expectations to uphold.

Automated Data Workflow And Processing

Today's end users may be aware of corporate compliance requirements, however, when performing daily tasks such as sharing files, emails and other data formats, the need to comply with regulatory measures is not necessarily top of mind.

Prepare For Gdpr Compliance With MFT

While no managed transfer solution can "make" your organization compliant with the GDPR, the right MFT solution can streamline the process of GDPR compliance through a secure system of policies, procedures, and technologies. Comprehensive privacy-related controls available in MFT solutions can facilitate GDPR readiness for organizations that are seeking to achieve GDPR compliance, along with an essential set of security controls to maintain a GDPR-ready posture.

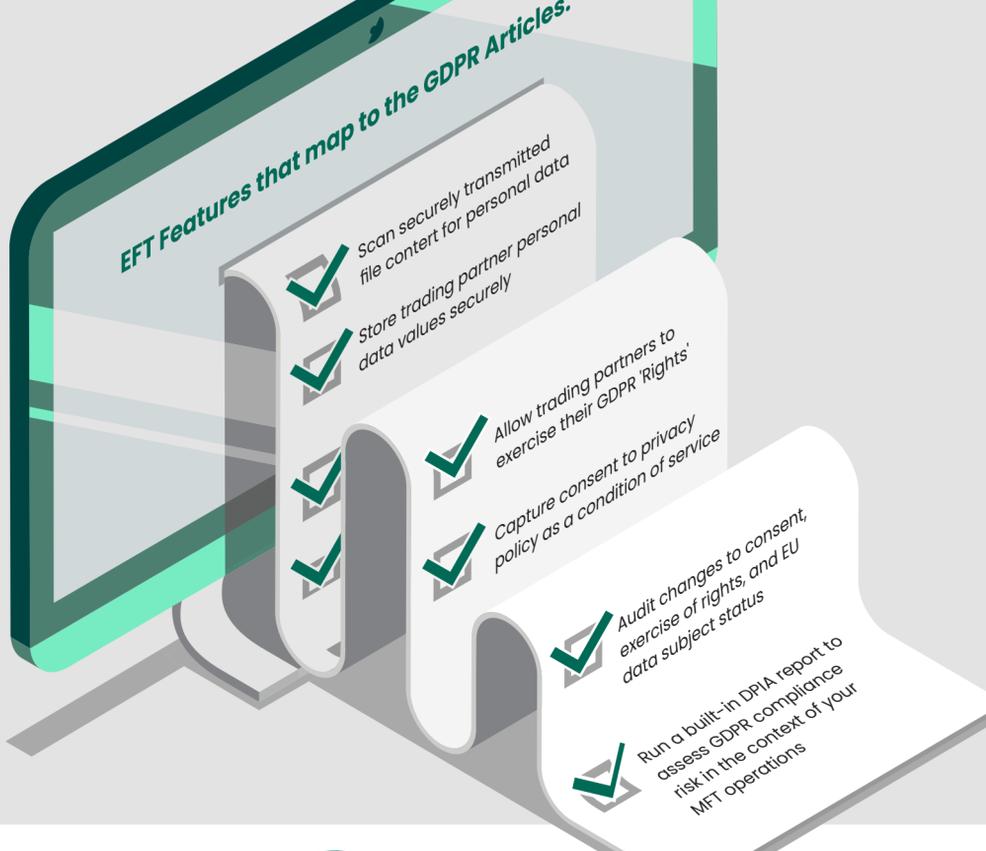

of global businesses surveyed after 1 year under GDPR, said that they are either failing to meet regulatory requirements, are having trouble keeping up to date, or both.
