

## Mail Express®

### Key Features:

- > Unlimited File Size
- > Outlook integration
- > HTTPS file transfers
- > Auditing and reporting
- > IPv6 compatible
- > AD/LDAP integration
- > FIPS 140-2 approved protocols
- > Message encryption
- > AV/DLP server integration
- > Multi-language support

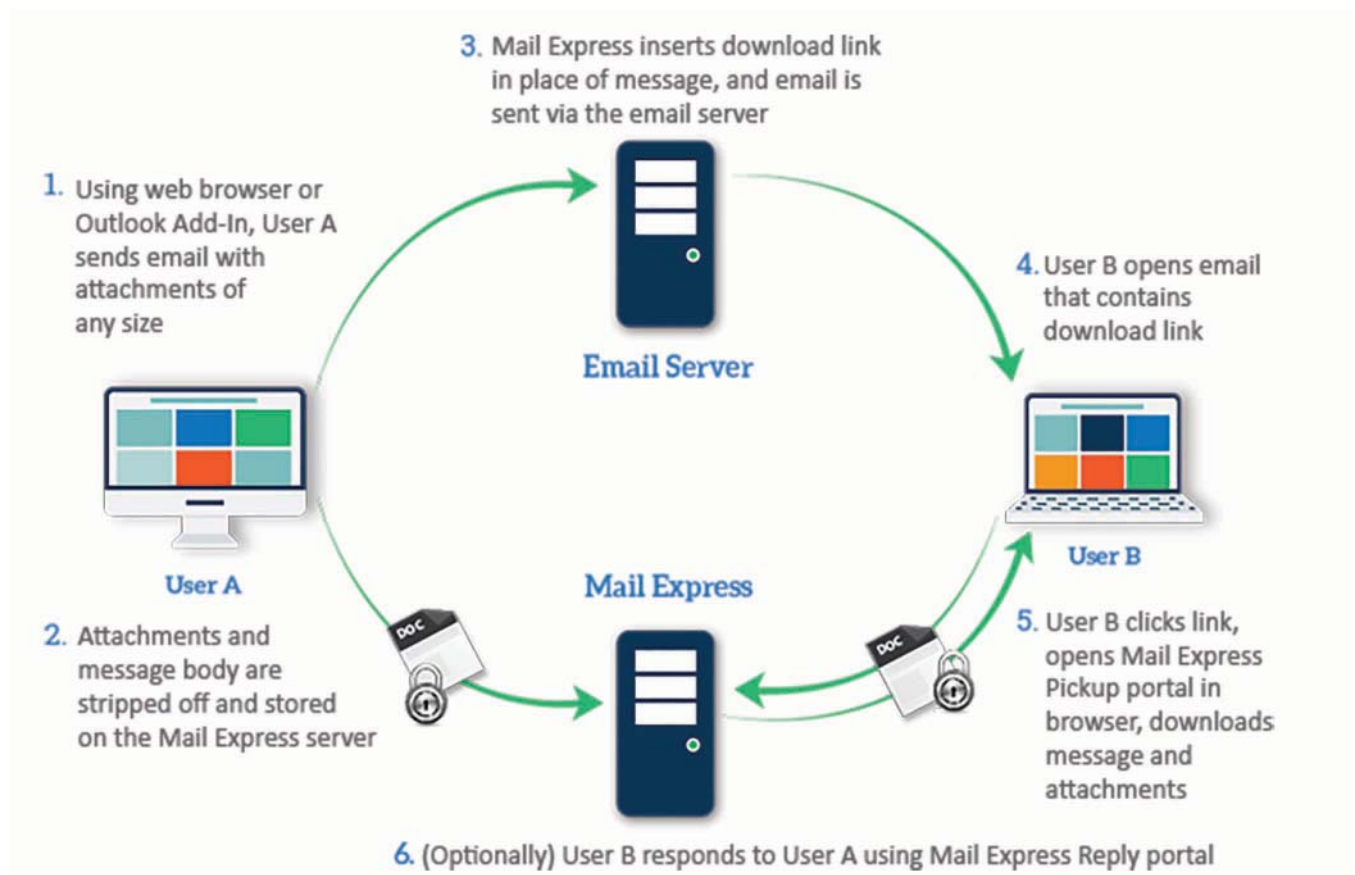

*Secure File Exchange for Your Business*

### Large File Exchange for the Enterprise

Person-to-person file transfers are a part of everyday business operations. Unfortunately, many times those file transfers occur using unapproved, unsecured methods (such as personal email accounts or “Box” sites) because users are not provided a simple way to handle large file transfers within their current infrastructure. Mail Express® provides an easy way to facilitate those transfers in a secure, authorized manner.

#### *The Mail Express Solution*

Mail Express allows email attachments to be transferred easily and securely, while maintaining the mechanics of the email attachment from the sender’s perspective. Using the Microsoft Outlook Add-In or the secure web portal, Mail Express gives individuals the ability to seamlessly send email attachments as they always have, while adding IT control, auditing, policy-compliance, and self-maintaining storage behind the scenes.

## Mail Express Capabilities:

- > Policy-based attachment control
- > Separate file expiration and file retention
- > Globalscape® EFT™ and DMZ Gateway® integration
- > Resumable file uploads and downloads
- > Detailed package tracking for both user and administrator
- > Customizable web portals
- > Robust administrator control over users including mandating use of FIPS 140-2 approved protocols and encryption.
- > Support for multiple languages: English, German, Spanish, French, Chinese, Turkish, Italian, Portuguese
- > AV/DLP server integration, tested with the following tools:

**Antivirus:**

- > Kaspersky
- > Sophos
- > Symantec
- > Trend Micro
- > And others

**DLP:**

- > Symantec
- > Websense
- > McAfee
- > RSA
- > And others

## Deployment Options:

- > Database can be local or external to the Mail Express server
- > Outlook Add-in easily deployed using existing IT infrastructure (GPO, SCCM)
- > On premises or hosted in the cloud

## System Requirements

### Server

- > Windows Server 2012
- > Windows Server 2012 R2, requires GUI component (64 bit)
- > Windows Server 2008 R2

### Database

- > SQL Server 2008 R2 or later
- > Oracle

### Client

- > Microsoft Outlook 2007, 2010, 2013
- > Any device with a browser

## Key Benefits:

### *No User Training Necessary*

Integration with Microsoft Outlook and easy-to-use Web-mail form allow seamless integration with users' day-to-day work-flow.

### *Reduce IT Workload - FTP Alternative*

Reduce need for management of FTP accounts, one-time-use external accounts, and management of mail server storage.

### *Recipient Reply Capabilities*

Provides easy access for recipients of packages to return large files even though they have their own attachment limits.
