

DATASHEET

Enhanced File Transfer™ (EFT™) SMB and Enterprise Compare Editions

EFT is offered in six different bundles or “tiers,” as described below. The tiers are organized to meet the needs of small, medium, and enterprise businesses. You are not locked in to these specific groupings. For example, if SMB Tier 2 would meet all of your needs, but you also need a secure proxy server in the DMZ, you can add DMZ Gateway[®]. Anything marked Optional (○) in the table is available to add to your bundle. Certain features are available only in Enterprise. Compare features below to find exactly what you need, or call us—we’re here to help.
