

EFT™ AUTOMATION JUMP-START SERVICE

KEY RESULTS

- **Maximize** benefits of EFT automation

- **Enhance** EFT business value

- **Integrate** changing business requirements quickly

- **Train** automation team

- **Prevent** project delays

EFT™ Automation Jump-Start is a flexible, cost-effective service that can help get your team up and running on EFT automation event rules in record time. Our consultants combine their deep understanding of EFT with a wealth of experience to help you prevent project delays and maximize the benefits of automation for EFT.

JUMP-START SERVICE INCLUDES:

- Consulting regarding automation needs
- Training, including coaching and mentoring
- Implementation assistance

This service assigns a dedicated resource to work with you on your automation needs for 1, 3, or 5 consecutive days. **EFT Automaton Jump-Start** is focused on enhancing EFT business value in a variety of scenarios, including:

- Refactoring existing EFT automation jobs
- Migrating other vendors' platform transfer jobs
- Moving complex, home-grown automation scripts into our simplified EFT automation modules

APPROACH

EFT Automation Jump-Start follows a phased approach. We pick one requirement at a time and provide a simple solution. We then build the job, test, and release a version. Afterwards we can improve it, applying more use cases or test cases until the job is ready to be released.

Our flexible approach is great for clients who need to integrate changing business requirements without losing traction on their project. Throughout **EFT Automation Jump-Start**, customers maintain close control over their budget and retain ownership of their implementation process. Project phases are described below:

- **Design and Analysis phase:** The first phase is to help your team make decisions about specific development tasks. We work with you to collaboratively examine business requirements and define a number of test cases for the job. If you're starting from an existing automation, we'll review the structure jobs/workflows and data structures in use and help you choose between reusing or refactoring workflows. During the design and analysis phase, consultants will provide you with the number of automation jobs and test cases that will be accommodated in the timeframe of the service. Your team can prioritize these appropriately and adjust as needed.
- **Training phase:** The second phase is training for your EFT team. The training covers EFT event rules and advanced workflows that apply to your automation requirements. After training is complete, your team will have a working automation they can use as part of their project.
- **Build phase:** The third phase involves building and testing. Starting from a prototype, we mentor your team as they deploy the prototype into your environment to ensure functionality.

ABOUT GLOBALSCAPE

Globalscape, Inc. (NYSE MKT: GSB) is a pioneer in securing and automating the movement and integration of data seamlessly in, around and outside your business, between applications, people and places, in and out of the cloud. Globalscape provides cloud services that automate your work, secure your data and integrate your applications – while giving visibility to those who need it. Globalscape makes business flow brilliantly. For more information, visit <http://www.globalscape.com> or follow the blog and Twitter updates.

FLEXIBLE OPTIONS

We offer three **EFT Automation Jump-Start** options to accommodate many different business needs. Each option features a specific number of days a developer will work on your automation:

- **1 day** (remote or onsite): One (1) dedicated consultant for **up to one** (1) day
- **3 days** (remote or onsite): One (1) dedicated consultant for **up to three** (3) consecutive days
- **5 days** (remote or onsite): One (1) dedicated consultant for **up to five** (5) consecutive days

These options will provide you with the fastest and most cost-effective way to get your project going.

Additionally, our services don't have to end with your initial deployment. We can be your partner in dealing with problems found after deployment or restructuring needed to address changing requirements.
