

DATASHEET

Enhanced File TransferTM (EFTTM) Enterprise for Financial Services

INCREASE OPERATIONAL EFFICIENCY AND MAINTAIN COMPLIANCE

Secure data exchange solutions help financial services companies manage and share data from any device while ensuring only the people that should have access, get access. Globalscape's managed file transfer solution, Enhanced File TransferTM (EFTTM) helps keep data safe, while helping to maintain compliance for institutions of all sizes. EFT For Financial Services can boost your data management capabilities by helping to configure, deploy, and oversee policies from a central location. It also adds an additional layer of security by scanning files for viruses or proprietary information.

KEY BENEFITS

- **Visibility**
 - » Generate reports of transfers and admin/user activity
 - » Monitor transfers in real time
- **Security**
 - » Exceed security and compliance mandates
 - » Secure web transfers
 - » Secure P2P data exchange
 - » Keep data out of the DMZ
- **Automation**
 - » Advanced workflow automation
 - » Automated AV/DLP
- **Governance**
 - » Real time network management
 - » Generate reports for auditors

SYSTEM REQUIREMENTS

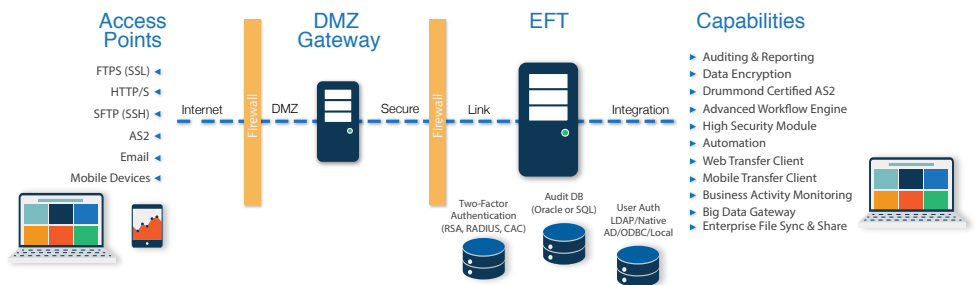

- Windows Server 2008 R2 or later
- 4GB RAM recommended
- Oracle or Microsoft SQL database
- MS .NET frameworks 4

CUSTOM SOLUTIONS TRUSTED FOR STRINGENT REGULATION

EFT for Financial Services helps financial services organizations around the world deal with the most rigorous data, security, and compliance requirements. The solution is used by thousands of banks, credit unions, and other financial institutions worldwide.

REAL-TIME AUTOMATION

EFT for Financial Services provides powerful data transfer automation capabilities for mission-critical data. Even for a small volume of transferred files, the number of steps needed to accomplish multiple file transfers daily can be very time consuming. With EFT, an IT administrator can set up file transfers to occur automatically. Ensure efficiency, security, and compliance across an organization by establishing controlled, automated data transfer processes.

REDUCE RISK AND NON-COMPLIANCE

Organizations are subject to a number of regulations, such as PCI DSS, SOX, GLB, and more. EFT for Financial Services helps financial organizations meet compliance and security mandates, with the addition of the High Security module for an enhanced layered security approach and the DMZ Gateway® to keep data from being stored outside the internal network. EFT for Financial Services provides automatically enforced policies, expiration of data access, purging of old data and records, and purging of inactive accounts—without the need for human intervention.

EASY APPLICATION AND SYSTEMS INTEGRATION

Compatibility between many different systems and applications is a key in any data management strategy. What's more, your organization may have outgrown legacy or homegrown file transfer systems. EFT for Financial Services is designed to help integrate disparate systems and applications, saving valuable time, reduce complexity and, most importantly, reduce human error, through EFT Connection Profiles and Event Rules.

EFT Enterprise for Financial Services includes modules that are purpose-built to help healthcare organizations meet security and compliance best practices.

- **DMZ Gateway** functions as a proxy network in the DMZ to protect internal processes by segmenting data transmission so there is no direct line of sight into your internal network, acting as a go-between for EFT and the external network. With DMZ Gateway, no data is ever stored, not even temporarily, in the DMZ.
- The **High Security module (HSM)** controls access to data and monitors for compliance. The FIPS 140-2 compliant cryptographic module also helps to secure sensitive data and provide granular security controls to prohibit access to files through file permission assignments, limiting of unsecure ciphers/protocols, and encrypting data at rest.
- The **OpenPGP module** protects data at rest and in transit with encryption, decryption, and signing of files.
- The **Advanced Workflow Engine** automates routine file transfer processes, freeing up administrators in the IT department for other tasks.
- The **Content Integrity Control** Action can be added to workflows to automatically process files in antivirus or data loss prevention servers
- The **Auditing and Reporting module (ARM)** captures all of the transactions passing through the EFT platform and allows admins to query the data and view reports. This process simplifies the task of compiling reports for audits.
- **Business Activity Monitoring** is a real-time visibility dashboard to track file transfers, review statistics, and query reports.
- **Workspaces** in an enterprise secure file sharing solution that allows staff to easily and securely share folders and their files with internal and external users through a web browser.
- **Web Transfer Client** allows you to upload to and download from EFT through a web browser.

ABOUT GLOBALSCOPE

Globalscape is an innovative software company that secures mission-critical exchanges of data across multiple platforms - including remote and mobility solutions - for businesses worldwide. Through superior software, standards compliance and experienced, reliable support, Globalscape secures information exchange for individuals, global enterprises, governments, and small and medium enterprises across a wide range of industries.
