Enhanced File Transfer™ (EFT™) Enterprise for Entertainment and Media

KEY BENEFITS

- **Visibility**
  - » Generate reports of transfers and admin/user activity
  - » Monitor transfers in real time
- **Security**
  - » Exceed security and compliance mandates
  - » Secure web transfers
  - » Secure P2P data exchange
  - » Keep data out of the DMZ
- **Automation**
  - » Advanced workflow automation
  - » Automated AV/DLP
- **Governance**
  - » Real time network management
  - » Generate reports for auditors

SYSTEM REQUIREMENTS

- Windows Server 2008 R2 or later
- 4GB RAM recommended
- Oracle or Microsoft SQL database
- MS .NET frameworks 4

SECURE DATA EXCHANGE SOLUTION FOR ENTERTAINMENT AND MEDIA

Media organizations rely on Globalscape's managed file transfer software, EFT Enterprise, to securely deliver high quality media worldwide. EFT Enterprise for the Media and Entertainment industries helps organizations improve their productivity, while helping them provide their consumers and business partners with high-quality content, eliminating file-send errors and time-consuming manual processing of shipping drives and tapes. This means that distributed teams, business partners and outside vendors can easily share and exchange files regardless of size.

ENHANCED SECURITY FOR DATA EXCHANGES

EFT Enterprise for Media and Entertainment provides access to content for those authorized to view it and it boosts operational efficiency by providing an easy way for users to exchange files on-the-go. IT retains the control – move, track, audit, and secure your sensitive data.

REAL-TIME AUTOMATION

Get powerful automation for time-sensitive and confidential data. Even for a small volume of transferred files, the number of steps needed to accomplish multiple data exchanges daily can be very time consuming. With EFT, an IT administrator can set up data transfers to occur automatically. Establish controlled, automated processes for key information exchange tasks to ensure efficiency, security, and compliance across an organization.

FASTER FILE TRANSFERS FROM ANYWHERE IN THE WORLD

Delays or latency in moving data can create serious challenges for a business and the size of data being moved is only increasing, causing additional strain on bandwidth. EFT is designed to increase the speed, efficiency and reliability of data movement across high-latency networks.
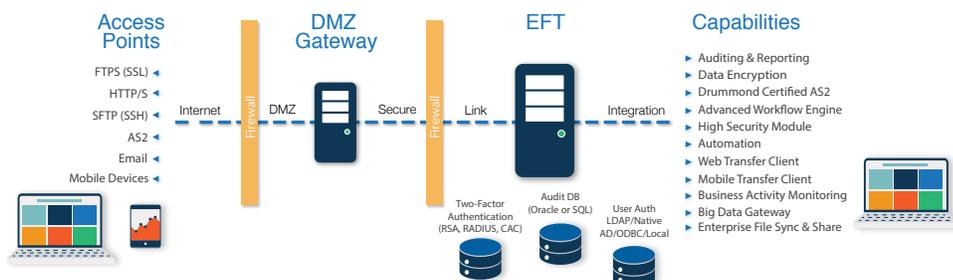

MOBILE DATA TRANSFER

Remote employees and partners depend on access to files. EFT provides secure file transfer capabilities via a web browser or on all major mobile devices so that remote or field employees can securely access the data they need. The best part is that data is stored securely within organizational boundaries instead of on a consumer cloud server. The Web Transfer Client and Mobile Transfer Client provide secure, monitored access to EFT files on the go.

- **DMZ Gateway®** functions as a proxy network in the DMZ to protect internal processes by segmenting data transmission so there is no direct line of sight into your internal network, acting as a go-between for EFT and the external network. With DMZ Gateway, no data is ever stored, not even temporarily, in the DMZ.

- The **High Security module (HSM)** controls access to data and monitors for compliance. The FIPS 140-2 compliant cryptographic module also helps to secure sensitive data and provide granular security controls to prohibit access to files through file permission assignments, limiting of unsecure ciphers/protocols, and encrypting data at rest.

- The **OpenPGP module** protects data at rest and in transit with encryption, decryption, and signing of files.

- The **Advanced Workflow Engine** automates routine file transfer processes, freeing up administrators in the IT department for other tasks.

- The **Content Integrity Control** Action can be added to workflows to automatically process files in antivirus or data loss prevention servers

- The **Auditing and Reporting module (ARM)** captures all of the transactions passing through the EFT platform and allows admins to query the data and view reports. This process simplifies the task of compiling reports for audits.

- **Business Activity Monitoring** is a real-time visibility dashboard to track file transfers, review statistics, and query reports.

- The **Accelerate module** enables faster file transfers from anywhere in the world over high-latency networks.

- **Web Transfer Client** allows you to upload to and download from EFT through a web browser.

ABOUT GLOBALSCAPE

Globalscape is an innovative software company that secures mission-critical exchanges of data across multiple platforms - including remote and mobility solutions - for businesses worldwide. Through superior software, standards compliance and experienced, reliable support, Globalscape secures information exchange for individuals, global enterprises, governments, and small and medium enterprises across a wide range of industries.
