

DATASHEET

Enhanced File TransferTM (EFTTM) Enterprise for Retail

INCREASE OPERATIONAL EFFICIENCY AND MAINTAIN COMPLIANCE

Customers want to shop without fear of identity theft. Retailers want to protect their reputation by protecting their customers' personal and financial information. Globalscape's managed file transfer solution, Enhanced File TransferTM (EFTTM), can protect your data at rest and in transit, and help you comply with standards and regulations such as PCI DSS. EFT Enterprise for Retail can turn a complicated data transfer environment into simple, efficient data transfer environment with increased user productivity and control.

KEY BENEFITS

- **Visibility**
 - » Generate reports of transfers and admin/user activity
 - » Monitor transfers in real time
- **Security**
 - » Exceed security and compliance mandates
 - » Secure web transfers
 - » Secure P2P data exchange
 - » Keep data out of the DMZ
- **Automation**
 - » Advanced workflow automation
 - » Automated AV/DLP
- **Governance**
 - » Real time network management
 - » Generate reports for auditors

SYSTEM REQUIREMENTS

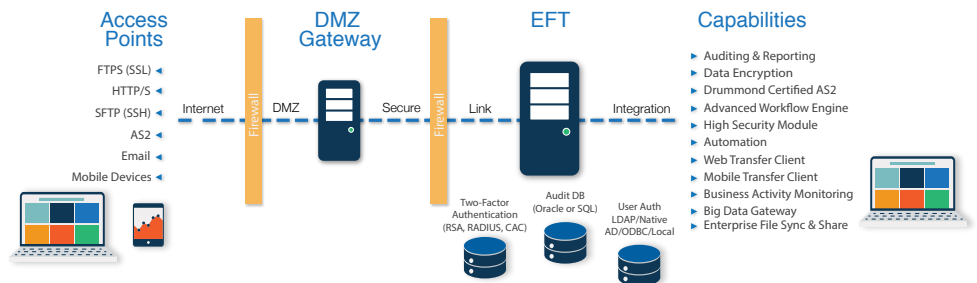

- Windows Server 2008 R2 or later
- 4GB RAM recommended
- Oracle or Microsoft SQL database
- MS .NET frameworks 4

EXCHANGE STRUCTURED BUSINESS DATA SECURELY OVER HTTP OR HTTPS

Communicate securely with distributors and trading partners using AS2 to transfer EDI messages and other types of data. The Drummond-certified AS2 module gives EFT for Retail the ability to transfer data using AS2 over HTTP or HTTPS. Transaction monitoring tools let organizations identify and resolve problem transactions, and detailed reports provide detailed analysis of all transactions. Automatically send AS2 data using hot folders, scheduled events, or custom triggers in EFT for Retail.

MAINTAIN PCI DSS COMPLIANCE

EFT for Retail is designed to help retail organization facilitate compliance of customer and business data to meet requirements mandated by PCI DSS and other standards. EFT for Retail provides automatically enforced policies, expiration of data access, purging of old data and records, and purging of inactive accounts—without any need for human intervention.

REDUCE STAFFING COSTS WITH AUTOMATED DATA WORKFLOW MANAGEMENT

Retailers must communicate with many dispersed locations and move large volumes of data. Merchandising, pricing, and replenishing must take place in near real-time to keep up with the fast pace of retail cycles. EFT for Retail has advanced automation features to reduce the burden on IT staff. As files are transmitted to and from multiple partners and the internal network, native event rules in EFT can execute file transfer operations that are specific to the data, such as encryption, renaming, moving, and numerous other actions.

EFT Enterprise for Retail includes modules that are purpose-built to help retail organizations meet security and compliance best practices.

- **DMZ Gateway**[®] functions as a proxy network in the DMZ to protect internal processes by segmenting data transmission so there is no direct line of sight into your internal network, acting as a go-between for EFT and the external network. With DMZ Gateway, no data is ever stored, not even temporarily, in the DMZ.
- The **High Security module (HSM)** controls access to data and monitors for compliance. The FIPS 140-2 compliant cryptographic module also helps to secure sensitive data and provide granular security controls to prohibit access to files through file permission assignments, limiting of unsecure ciphers/protocols, and encrypting data at rest.
- The **OpenPGP module** protects data at rest and in transit with encryption, decryption, and signing of files.
- The **Advanced Workflow Engine** automates routine file transfer processes, freeing up administrators in the IT department for other tasks.
- The **Content Integrity Control** Action can be added to workflows to automatically process files in antivirus or data loss prevention servers
- The **Auditing and Reporting module (ARM)** captures all of the transactions passing through the EFT platform and allows admins to query the data and view reports. This process simplifies the task of compiling reports for audits.
- **Business Activity Monitoring** is a real-time visibility dashboard to track file transfers, review statistics, and query reports.
- The **AS2 module** connects, delivers, validates, and acknowledges EDI data messages
- **Web Transfer Client** allows you to upload to and download from EFT through a web browser

ABOUT GLOBALSCAPE

Globalscape is an innovative software company that secures mission-critical exchanges of data across multiple platforms - including remote and mobility solutions - for businesses worldwide. Through superior software, standards compliance and experienced, reliable support, Globalscape secures information exchange for individuals, global enterprises, governments, and small and medium enterprises across a wide range of industries.
