

USE CASE

NATIONAL RETAILER STREAMLINES BIDDING PROCESS WITH GLOBALSCAPE EFT™ ENTERPRISE & WEB TRANSFER CLIENT

GLOBALSCAPE EFT™ WORKSPACES PROVIDES EMPLOYEES SECURE FILE TRANSFER PORTAL

KEY DETAILS

OUTCOME

Convenient web browser log in

Automated bidding workflow and process

Immediate visibility into who shared what files and folders

Secure file sharing

APPLICATION

- + Transfer files securely and easily with the Web Transfer Client
- + Multiple concurrent transfers for fast delivery
- + Track file movement from beginning to end between end-users, and external trading partners for prospective bids

PRODUCTS

- + EFT™ Enterprise
- + EFT™ Web Transfer Client
- + EFT™ Workspaces

OVERVIEW

A major national retail corporation adopted Enhanced File Transfer™ (EFT™) as their managed file transfer (MFT) solution of choice. Undergoing continual expansion, they are routinely faced with the prospect of distributing plans for new retail and warehousing facilities to local developers and then receiving bids from those developers. One of the various ways that the national retailer leverages EFT is to empower the appropriate employees to initiate and manage this bidding process from start to finish.

CHALLENGE

Bids received are confidential. Participating developer firms are not allowed to know about any of the competing firms, nor what the contents of those bids may be. Additionally, IT would like to avoid additional administrative overhead, including provisioning new users, setting up directory structures, defining permissions, and so on.

This retail distributor needed a secure portal for end-users as well as outside developers to trade files via HTTPS.

IMPLEMENTATION

EFT was set up so that for each project, employees can use their web browser to log in securely to EFT via HTTPS using the Web Transfer Client. The employees create folders for the new projects and then within that project's folder, they create a sub folder for generally available plans to be shared with local firms.

Project employees upload the plans into that folder and use Workspaces to share that folder with the appropriate email contact(s) at the various local firms who will be bidding on the job and enable download permissions.

RESULT

When the distribution Workspace is created, all the various contacts receive their invitations to participate in the Workspace. If they have participated on previous projects, then they log in with their existing credentials. If they have not, then they complete the invitation process for their account to be provisioned.

The employee creates another subfolder under the Project folder for bid

GLOBALSCAPE

ABOUT GLOBALSCAPE

Globalscape, Inc. (NYSE MKT: GSB) is a pioneer in securing and automating the movement and integration of data seamlessly in, around and outside your business, between applications, people and places, in and out of the cloud. Whether you are a line-of-business stakeholder struggling to connect multiple cloud applications or an IT professional tasked with integrating partner data into home-grown or legacy systems, Globalscape provides cloud services that automate your work, secure your data and integrate your applications—while giving visibility to those who need it. Globalscape makes business flow brilliantly.

submissions, and then within that folder creates folders for each firm. Each firm's folder can then be shared as a private Workspace with only the contact(s) at that firm, this time selecting more extensive permissions to allow uploading, additional subfolder creation, and so forth.

Those contacts are notified when a new Workspace has been shared with them, and the next time they log into EFT they will see their new Workspace folder under a "Bid Submissions" folder in addition to the original folder for the distribution of the plans. When the bid is finalized and ready for submission, they log in and upload the bid files to that folder.

With EFT and Workspaces, all confidentiality concerns are addressed, the employees are empowered to manage their own project bid processes with a simple, straight-forward, repeatable process they can follow, and IT is relieved of administrative overhead associated with creating and sharing folders and provisioning new external users.
